

INTRODUCING webFTA

For several years Videotel has provided software programs to record and manage records of all types of training which takes place on board ship. webFTA (Fleet Training Administrator) is the office records management program that offers a custom made solution for training administrators and managers. It allows access to all training records from all ships and offers a variety of data assessment tools. webFTA works by importing training records data from OTM+ (Onboard Training Manager Plus), its on board partner program.

Advances in technology, together with experience gained from the use of FTA have allowed Videotel to launch an online version, WebFTA.

- **View an individual's records and see what training is missing**
- **Create over 20 training reports**
- **Export reports for further analysis**
- **Print reports**
- **Add certificates and on shore data**
- **Keep a record of seminars and crew attendance**
- **Set rank related pass rates for CBT and courses**
- **Schedule frequency of rank specific training and export to ships**
- **Schedule statutory and non-statutory on board training tasks**
- **Show a clear training structure to Port State Control and other audit bodies**

Records management just got even easier!

FAST, SAFE & EASY

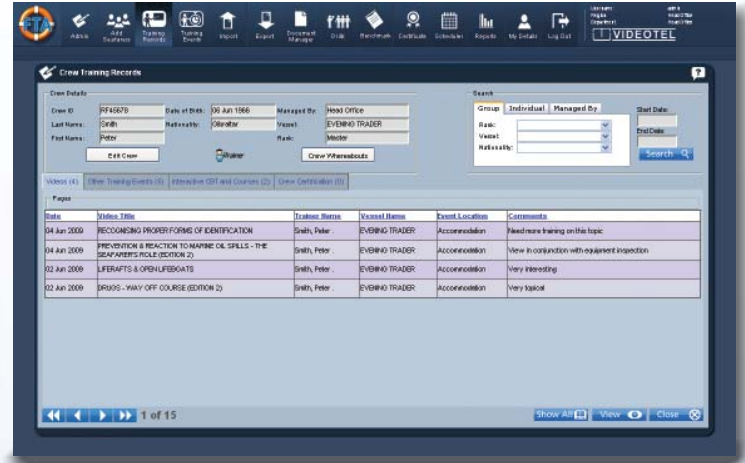

Working from databases accessible via the Internet makes operations run smoother for everyone.

Password protected records can be seen from any PC in the world with an Internet connection.

New automation techniques, only possible by using the Internet, considerably reduce the administrative burden of transferring training records from ship to shore and shore to ship.

This approach simplifies the system, saving time tracking crew training, and processes audits quickly.

It also helps show adherence to the ISM Code.
